

# ROUZ MAJLESSI

## EXPERIENCE

**AVANADE**, Seattle, WA — *Software Engineer*

JULY 2017 - PRESENT

Analyze client's business needs and requirements to design and deliver technical business solutions.

- Refactored existing code base to extract reusable code into methods that were used throughout program solutions.
- Utilizing Scrum, practiced agile ceremonies such as daily standups, sprint planning, story mapping, backlog refinement to maximize our teams agility and delivery.
- Collaboration with developers, stakeholders, and architects, to design and develop highly scalable and maintainable, end-to-end custom software applications.

### Clients/ Projects:

- **Dow Chemical: Frontend developer**  
Translated design teams UX wireframes and mockups into **responsive** interactive features, using **Ionic 3 framework**. Worked with middle-tier developers to help integrate application user interface with server side **Web APIs**.
- **PepsiCo: Full-Stack developer**  
Built data visualization tools (**D3.js**) to make clear and concise visual representation of data. Purpose to provide more complex research analysis to support business operations and present findings to management.
- **Puget Sound Energy: Backend developer**  
Manage and add to the external developer portal containing **swagger**-based testing interfaces and "**How-To**" articles. Develop API services in an Agile environment.
- **Microsoft, TreasuryOne: Front-End developer**  
Developed **Angular 6** UI components, making them easy to maintain and to ensure they are highly modularized. Cooperating with the backend developers in the process of building the **RESTful APIs**.
- **AT&T: Front-End developer**  
Developed a conversational chatbot component that understands their users, curates information, answers questions, and captures contracts to direct them where they need to go.

**VendNovation**, Redmond, WA — *Software Engineer Intern*

JAN 2017 - MAR 2017

Specialized in cloud-based vending solutions. Technologies: Ember.js
